Python-React

Apr 8, 2025 4 Mins read Fullstack Developer (Django/Flask & React/Angular) We are looking for a Fullstack Developer (Django/Flask & React/Angular) to join our team. Joining us, you will have a chance to work with our proactive and talented people, and you will have a chance to work directly with our clients from North America, Singapore, Japan, Korea, and Australia. Why WATA TECH? Work with young and talented engineers with great teamwork. Proud of producing software applications that millions of people are using every day. A longterm project with top clients in the world. Very attractive salary and annual salary review. Opportunity for working overseas. Job Description: Develop, test, and maintain web applications using Python (Django/Flask) and JavaScript (React/Angular). Work closely with the Team Lead and other developers to implement scalable, maintainable, and highperformance solutions. Write clean, wellstructured, and efficient code, following industry best practices. Develop and maintain RESTful APIs and integrate them with frontend applications. Contribute to CI/CD pipelines and deployment automation under the guidance of senior developers. Write unit tests and integration tests to ensure code quality and reliability. Participate in code reviews to improve teamwide development practices. Collaborate with QA engineers to ensure smooth testing and bug resolution. Follow SCRUM and Agile methodologies, actively participating in daily standups, sprint planning, and retrospectives. Use AIpowered tools where applicable to improve development efficiency (e.g., for debugging, code reviews, or test automation). Job Requirements: 3+ years of handson software development experience. Strong programming skills in Python & JavaScript, with experience in Django/Flask (backend) and React/Angular (frontend). Experience working with singlepage applications (SPAs) and consuming RESTful APIs. Should be proficient in reading and writing English, and able to speak to a reasonable extent to ensure smooth daytoday communication. Familiarity with CI/CD pipelines and deployment automation. Exposure to unit testing frameworks (e.g., Pytest, Jest, Mocha) and testdriven development (TDD) concepts. Comfortable working in a fastpaced, Agile startup environment. Willingness to learn, adapt, and take ownership of tasks. Ability to collaborate with a team while also handling individual responsibilities. Open to using AIpowered tools for debugging, testing, and productivity enhancements. Nice to Have: Experience working in B2B SaaS applications exposure to multitenant architectures, API integrations, and access control mechanisms. Exposure to QA automation frameworks (Selenium, Cypress, Playwright). Knowledge of performance tuning & optimization improving API response times, optimizing database queries, or frontend performance. Experience working with message queues (RabbitMQ, Kafka, SQS) and async processing. Familiarity with DevOps practices (Docker, Kubernetes, Terraform, AWS/GCP/Azure). Understanding of observability & monitoring tools (Datadog, Sentry, Prometheus). Benefits: Competitive salary package 5 working days per week (MondayFriday), to some extent flexible working hours. Friendly, professional and open working environment. Opportunities to improve English skills within an international team English is an official language. Skills up plan with Tech talk, soft skill talk, English club, working process training.
